# Energy Efficiency, Power security

We save you power. Decrease your costs and lessens the environmental impact of your business on the environment. It's ethically the right thing to do and it make financial sense. We also provide power security, so that your business can still operate when the power goes down.

## Step 1: Energy Efficiency

Reduce electricity consumption in all areas possible.

- Energy Efficient Lighting
- Motion and Light sensors
- Power factor correction
- Peak demand optimization

## Step 2: Backup and Storage

Ensure constant supply and backup of existing systems.

- Uninterrupted Power Supplies (UPS) – Battery back-up
- Generator backup and hybrid systems

## Step 3: Generate your own power

Use alternative power generating methods and save.

- Solar Energy
- Wind Energy
- Hydro energy

# Customer References

"Durbanville has saved more than R25,000 per month on its electricity bill, which dropped from more than R200,000 to less than R170,000. Given the implications of Eskom's planned electricity hikes, this is a huge saving for the business, and plans are in place to implement further savings to reduce the monthly bill below R160,000."

**Graham Pateras**  
Owner, Pick n Pay Durbanville

"Oxbow went out of their way to find and install solutions that worked for us."

**Francois Steyn**  
General Manager, Double Tree by Hilton

"The oxbow solution used less light fittings and created more light which was just what we needed."

The finance option meant that our electricity savings paid for the new lighting system. Perfect business sense."

**Tinashe Nyawata**  
System Administrator,
